

AI-Powered Mobile App Security.

Trusted by enterprises, government organisations and digital innovators **across Middle East and globally** to secure mobile applications, manage risk and meet evolving security and privacy requirements.

The Appknox Advantage:

<90 min

Automated vulnerability assessment

<1%

False positives

2M+

Applications tested

60+

Countries served

Regional and global compliance coverage

UAE PDPL, SAMA, NCA, ADHICS, GDPR, PCI DSS, ISO 27001 and OWASP

Our Solutions:

Static Application Security Testing (SAST)

Scan your apps in just 2 clicks for instant vulnerability detection and compliance checks.

Dynamic Application Security Testing (DAST)

Automated testing on real devices, in real environments - no simulators.

API Security Testing (APIT)

Secure your app backend by uncovering flaws across critical APIs and endpoints.

Penetration Testing

Certified experts simulate advanced attack scenarios to identify critical risks before attackers do.

Software Composition Analysis (SCA)

Identify vulnerabilities across open-source, third-party and AI components with SBOM and AI-BOM.

Security Analytics Dashboard

Intuitive dashboards and trends provide instant visibility into your mobile application security posture.

Next-Gen Capabilities

KnoxIQ - Exploitability Intelligence for Mobile AppSec

Move beyond static severity scores. KnoxIQ combines vulnerability data with exploitability signals, runtime context and business impact to help security teams identify what can actually be exploited and prioritise remediation.

Agentic DAST & Agentic Deep Scan

Move beyond predefined test paths with autonomous security agents that explore application behaviour, adapt testing techniques and investigate vulnerabilities more deeply. Agentic DAST dynamically tests applications across real devices, while Agentic Deep Scan performs deeper contextual analysis to uncover complex and previously overlooked risks.

Privacy Shield

Discover sensitive data flows and PII exposure across mobile applications, strengthen privacy controls and support compliance with UAE PDPL, GDPR and other regional and global requirements.

Storeknox

Continuously discover and monitor apps across public app stores, detect application drift, clones and impersonation, and support rapid fake-app investigation and takedown.

Why Middle East Security Teams Choose Appknox

Trusted across critical industries

Trusted by banks, fintechs, telecoms, enterprises and government organisations across the region and globally.

Gartner

Recognised in Gartner Research

Trusted by leading enterprise security teams across global markets.

Regional and global compliance

Support for UAE PDPL, SAMA, NCA, ADHICS, PCI DSS, GDPR, ISO 27001 and OWASP requirements.

Local hosting and flexible deployment

UAE- and KSA-hosted cloud environments, with cloud and on-premise deployment options to meet data-residency and governance requirements.

Let's Secure the Middle East's Mobile Future
