About Us

Value Added Distributor for Information & Cybersecurity Solutions

Bulwark partners with best-of-breed technology vendors, offering award-winning Information and cybersecurity solutions with excellent customer service. We deliver round-the-clock value-added services through our partner network across Middle East, India and North Africa region.

Bulwark is the leading provider for Information Security products & solutions in Middle East, India and North African region. Headquartered in Silicon Oasis Dubai and offices in Saudi Arabia and India, Bulwark serves the entire region with innovations from more than 30 cutting-edge technology vendors and works with more than 750 channel partners, with the aim of bringing the best in technology to customers in the region. Customers from various sectors including Banking & Finance, Government, Oil & Gas, Defence, Manufacturing, Hospitality, Medical, and Education, rely on solutions distributed by Bulwark for securing and managing their IT infrastructure.

Bulwark has won numerous industry awards for leadership in IT sales and support and has been rated as the best VAD in the region.

Bulwark Technologies has expanded its operations in the Indian sub-continent with head office in Bangalore. Bulwark's India office provides best support through a robust partner network to its growing customer base in India.

FORTRA

Data protection safeguards vital information from theft or loss, whether intentional or accidental. Robust programs shield against both malicious and unintentional actions, ensuring data is accessible only for authorized purposes and compliant with regulations. With businesses generating and storing increasing volumes of data, especially with remote work and cloud migration, effective enterprise data protection is critical. Programs typically focus on protecting regulated data like PCI, PII, or PHI, and safeguarding intellectual property. Balancing protection needs with sharing risks is key, avoiding overly aggressive measures that hinder business or overly lenient ones that heighten risk

Fortra's Digital Guardian

Fortra's Digital Guardian deploys and starts fast to give you immediate visibility into your data security, intuitive results in out-of-the-box dashboards, and greater deployed efficacy. From discovery to monitoring to blocking, comprehensive data loss prevention capabilities help support compliance initiatives and protect against serious risk while guiding users on the next-best security step. SaaS and Managed Service deployment options help deliver results faster and give you the expertise
you need

Fortra's Data classification

Fortra's Data classification solutions enhance data security by applying visual and metadata labels so you can best support DLP policies. AI engine recommendations help reduce business friction by guiding which label is best to apply, and employees receive real-world security training that drives visibility and engagement with data security practices across the organization.

Fortra's secure collaboration

Fortra's secure collaboration solution encrypts and controls access to sensitive files wherever they go. Taking a Zero Trust approach to file sharing, collaboration with anyone – external or internal – is always quick and secure, with the option to revoke access instantly at any time.

GoAnywhere Managed File Transfer

GoAnywhere Managed File Transfer (GAMFT) is a comprehensive solution that will manage your organization's file transfer software, file sharing, secure FTP, and automation needs through a single interface using the various protocols (HTTPS, SFTP, FTPS, AS2) in compliance with the regulations (PCI, GDPR, HIPPA, FISMA etc)

Clearswift

Clearswift offering advanced threat protection and data loss prevention solutions for businesses. Their flagship product, Clearswift Secure Gateway, provides comprehensive content inspection and policy enforcement to safeguard organizations against internal and external threats. With sophisticated content filtering and threat detection capabilities, Clearswift helps businesses protect sensitive data and maintain compliance with regulatory standards.

FORTRA

Cobalt Strike

Cobalt Strike is a threat emulation tool for cybersecurity professionals running Adversary Simulations and Red Team operations. Ideal for measuring your security operations program and incident response capabilities, Cobalt Strike utlilizes its powerful post-exploitation agents and covert channels in order to mimic an advanced threat actor quietly embedded in an IT network. No two engagements are alike with malleable C2 enabling network indicators to emulate different malware and versatile social engineering processes. Realistic scenarios, along with collaboration capabilities and robust reporting features create an enriched Blue Team training experience.

Outflank

Outflank Security Tooling (OST) is a broad set of evasive red team tools that cover every significant step in the attacker kill chain, from initial breach to data exfiltration. OST tools are explicitly developed to bypass defensive measures and detection tools, creating authentic scenarios that simulate a real-world attack from an advanced threat actor or cybercrime group. In addition to effectively assessing an organization's defenses, these offensive security tools also simplify red teaming, allowing users to easily perform complex tasks safely and without hassle.

Fortra's Terranova Security

Fortra's Terranova Security solution is a comprehensive program designed to strengthen organizations' defenses against cyber threats. Tailored modules cover a range of topics, from identifying phishing attempts to understanding compliance requirements. Through engaging content and interactive exercises, employees gain practical knowledge and skills to recognize and respond to potential security risks effectively. With Fortra's training, organizations not only strengthen their security posture but also cultivate a culture of vigilance and accountability among their workforce.

Securden

Securden is a leading provider of privileged access governance solutions, helping organizations prevent credential-based attacks, enforce least privilege, manage privileged access, and demonstrate regulatory compliance. It brings together unified PAM capabilities in a single package that includes,

- Password Management – Secure, store, and manage credentials centrally.
- Secure Remote Access – Enable secure, agentless access to critical systems.
- Privileged Session Management – Monitor, record, and audit privileged activities.
- Endpoint Privilege Management – Enforce least privilege without disrupting productivity.
- Vendor Access Management – Grant controlled, just-in-time access to third parties.

Available in both cloud and on-prem, Securden enables effortless deployment, helping enterprises achieve production-ready PAM in under 30 days—without external assistance. Its intuitive interface ensures seamless adoption, making security powerful yet simple

AppViewX

AppViewX is a cybersecurity company specializing in Certificate Lifecycle Management (CLM), Public Key Infrastructure (PKI) automation, and cryptographic asset management. With a mission to simplify and secure digital identity and certificate operations, AppViewX offers solutions that ensure trust and compliance across enterprises.

AVX ONE is AppViewX's cloud-native platform, delivering:

- Smart Discovery: Automatically identifies digital certificates across networks.
- Closed-Loop Automation: Automates certificate issuance, renewal, and revocation.
- Crypto Resilience Scorecard: Assesses and improves cryptographic health.
- Infrastructure Context Awareness: Integrates with existing IT and security systems for informed decision-making.

Specialized Modules:

- KUBE+: Certificate lifecycle management for Kubernetes environments.

Mend.io

Proactive application security with a single holistic solution. Trusted by the world leading companies, including IBM, Google and Comcast, Mend.io offers a full-spectrum application security platform designed to help leading organizations build and manage mature Appsec programs, enabling them to stop chasing vulnerabilities and start proactively managing application risk.

invicti

Invicti Merged DAST Market Leaders Netsparker and Acunetix into a new scalable Application Security Platform. By combining both solutions with AI enhancements and expanded capabilities, the industry's leading DAST solutions are now a powerful, complete AppSec platform, featuring:

- Dynamic, Interactive, and static security testing within a single platform
- Web app, Shadow API, and LLM Discovery & scanning
- Detection of more high and critical vulnerabilities with the help of AI
- All Vulnerabilities in a single view, with remediation orchestration for complete risk posture management

Invicti combines its industry-leading coverage, accuracy & speed with visibility and orchestration integrated into every step of your SDLC-at the scale you need. With DAST at the center, you are not just getting another security tool – you are getting a runtime force multiplier for your entire AppSec Program

Invicti Application Security Posture Management (ASPM) achieves overall Security posture visibility by integrating all security data into one crystal clear view, anchored with DAST runtime-verified correlations. It boosts the productivity of AppSec teams and enables better collaboration with developers through its orchestration, automation, and vulnerability management capabilities. Unlike one-size-fits-all offerings from broadline vendors, Invicti ASPM customer retain their best-of-breed testing tools and CI/CD workflows they trust to build their AppSec program.

mimecast

Mimecast is an AI-powered, API-enabled connected human risk platform, purpose-built to protect organizations from the spectrum of cyber threats. Integrating cutting-edge technology with human-centric pathways, our platform is engineered to enhance visibility and provide strategic insight that enables decisive action and empowers businesses to protect their collaborative environments, safeguard their critical data and actively engage employees in reducing risk and enhancing productivity. More than 42,000 businesses worldwide trust Mimecast to help them keep ahead of the ever-evolving threat landscape. From insider risk to external threats, with Mimecast customers get more. More visibility. More insight. More agility. More security

accops

Accops enables secure and instant access to business applications from any device and network, ensuring compliant enterprise mobility for business users while keeping governance with the organization. Accops' workspace virtualization, access gateway and identity management solution suite help organizations to consolidate the distributed end-user application infrastructure and bring endpoint management to the data center, improving the overall network security and reducing IT operational costs. Accops is a single-stop shop for building an integrated workspace for business users, providing seamless access to modern web applications, SaaS applications, client-server applications, legacy applications, virtual applications and virtual desktops

appknox

Appknox is the world's most powerful plug-and-play security platform that helps developers, security researchers, and enterprises to build a safe and secure mobile ecosystem. Appknox is able to outsmart even the smartest hackers. Launch the holistic vulnerability assessment (VA) with a one-click static scan after uploading your mobile app's binary. View how hackers interact with your apps in real time with dynamic testing and secure all endpoints with an API scan. Identify vulnerabilities in less than 60 minutes!

keystrike

Keystrike — Trust Every Keystroke - Block Lateral Movement. Every breach begins with a compromised input. Keystrike ensures it never happens again.

Keystrike verifies that every keystroke, click, and command originates physically from the authorized human and device — not from malware, hijacked sessions, or user impersonation etc.

Keystrike Core Protector is built for critical access channels like SSH and RDP. It continuously attests input integrity in real time — stopping lateral movement, credential theft, and insider manipulation before they even begin.

Keystrike Cloud Protector is built for any critical web-based interfaces like domain controllers etc. - Making sure the input on the web interfaces are originating from the real physical user and not from any adversaries.

Keystrike... Seamless to users... Invisible to attackers... Trusted by enterprises that can't afford to be wrong.

cyberbit

Cyberbit is the global leading provider of cyber ranges. Their cloud and on-premise cyber ranges deliver over 100,000 training sessions annually across 5 continents. Cyberbit's customers include Fortune 500 companies, leading telecom operators, MSSPs and system integrators, police departments, governments and militaries. Cyberbit Range is available as a cloud-based service or on-premise, customizable software platform.Cyberbit Range prepares cybersecurity teams for attacks, by delivering a hyper-realistic experience that immerses them in a virtual SOC where they use real-world security tools to respond to real-world, simulated cyberattacks. As a result, Cyberbit Range dramatically increases SOC team performance, reduces incident response times, improves teamwork, and accelerates evaluation, hiring, and certification.

CyberCyte

Founded 2019 in London United Kingdom. Enable organizations to detect threats and configurational drift easier and faster through a zero-trust model
Discover the Hidden Threats Through a Risk Based Approach to Threat Hunting by having –

- MDR Platform for Automated Threat Hunting
- Fast and Easy Cyber Risk Identification by Creating a Zero-Trust Model
- Can Analyze 250+ Artifacts Instead of Log Data
- Creating The Most Comprehensive Artifact Collection, Classification and Enrichment Framework

vicarius

vRx by Vicarius – Real-Time, Automated Vulnerability Management: vRx is engineered to be the most robust vulnerability remediation platform, shifting from problem detection to proactive resolution. Powered by native patching, custom scripting, automation, and patchless protection, Vicarius equips security and IT teams with a complete toolbox to efficiently eliminate CVE-related risk

eset

For 30 years, ESET® has been developing industry leading IT security software and services for businesses & consumers worldwide. With solutions ranging from endpoint & mobile security, to encryption and 2factor authentication, ESET's high performing, easy-to-use products give consumers & businesses the peace of mind to enjoy the full potential of their technology. ESET unobtrusively protects and monitors 24/7, updating defenses in real time to keep users safe & businesses running without interruption. Evolving threats require an evolving IT security company. Backed by R&D centers worldwide, ESET becomes the first IT security company to earn 100 Virus Bulletin VB100 awards, identifying every single "in-the-wild" malware without interruption since 2003

iStorage | Kanguru is a global leader in government-validated, PIN-authenticated, hardware-encrypted data storage and cloud encryption solutions, delivering cutting-edge data security solutions to governments and corporations worldwide. With a comprehensive portfolio that includes secure data storage, remote management, and data duplication products, iStorage | Kanguru upholds military-grade encryption standards and compliance with key regulations, such as GDPR, HIPAA, and SOX. Trusted globally, iStorage | Kanguru is committed to making advanced encryption solutions accessible

Fastly is a leading edge cloud platform built around a high-performance Content Delivery Network (CDN) that enables fast, reliable, and scalable digital experiences across websites, applications, and APIs. Alongside its core CDN capability, Fastly provides advanced security services including Next-Gen Web Application Firewall (WAF), DDoS protection, bot management, and API security. Its programmable edge architecture and real-time observability empower organizations to improve application performance, strengthen security, and deliver seamless user experiences globally.

42Gears is a leading Unified Endpoint Management provider, offering SaaS and On-premise based mobility solutions to secure, monitor and manage all business endpoints such as tablets, phones, desktops and wearables.

42Gears products support company owned as well as employee owned devices built on Android, iOS, Windows, Linux and ChromeOS platforms, and are used in verticals like healthcare, manufacturing, logistics, education and retail. 42Gears products are trusted by over 7000+ customers in more than 100 countries.

Jisa Softech (CryptoBind) is an Indian deep tech startup Working in the field of Cryptography, PKI and Quantum Cryptography used in Cybersecurity and Data Protection Solutions. We focus on data security and deliver advanced cryptographic and quantum cryptographic solutions. We specialize in protecting a variety of digital technologies, such as digital payments, PII data, blockchain, cloud infrastructure and the IoT.

motadata

Motadata AIOps is a platform built on Deep Learning Framework for IT Operation (DFITTM) that derives insights from metric, log, network traffic data, through automated data ingestion from a single agent. From detection to remediation, the AI engine improves

operational efficiency & accelerates digital transformation. It's a single unified platform for infrastructure monitoring, log analytics, & network observability. Organizations can achieve continuous automation through runbook & automated RCA & alerts on all events across a Hybrid Infrastructure, including cloud services. It helps IT operations leaders deliver better business outcomes through decisive insights & achieve interoperability using OOB third-party integrations.

Resecurity

Resecurity® is a cybersecurity company that delivers a unified platform for endpoint protection, risk management, and cyber threat intelligence.

Known for providing best-of-breed data-driven intelligence solutions, Resecurity's services and platforms focus on early-warning identification of data breaches and comprehensive protection against cybersecurity risks. Founded in 2016, it has been globally recognized as one of the world's most innovative cybersecurity companies with the sole mission of enabling organizations to combat cyber threats regardless of how sophisticated they are. Most recently, Resecurity was named one of the Top 10 fastest-growing private cybersecurity companies in Los Angeles, California by Inc. Magazine. An official member of AFCEA, NDIA, SIA and InfraGard..

MENLO SECURITY

Menlo Security – Eliminating Web and File-Borne Threats with Zero Trust.

Menlo Security is a global cybersecurity leader specializing in Browser Isolation and Enterprise Browser Security to protect organizations from zero day phishing, ransomware, malware, and other browser exploits. Its patented Isolation Core™ Platform ensures that malicious content never reaches user devices by executing all active content in the cloud, delivering a seamless, native browsing experience without endpoint software.

Menlo has recently expanded its capabilities into Zero Trust Data Detection & Response (DDR). Patented Positive Selection® Technology proactively disarms malicious content while preserving file functionality, enabling secure collaboration across email, cloud, and web platforms.

Its unified platform also provides Compliance Monitoring, and Actionable Analytics, safeguarding sensitive data throughout its lifecycle. Trusted by Fortune 500 Companies, Global Financial Institutions, and Government Agencies, Menlo Security delivers Scalable, AI-Powered Protection that supports Zero Trust strategies and digital transformation. Headquartered in Mountain View, California, Menlo continues to expand its global footprint, including strategic growth in the Middle East.

safetica

Safetica helps you prevent data leakage, guide staff on data protection, and stay compliant with regulations. Safetica is a cost-effective, easy-to-use Data Loss Prevention (DLP) solution. It performs security audits, prevents sensitive data from leaving your company, and sheds light on what is going on in your organization. Safetica can be deployed in a matter of hours – it secures your information quickly and easily. Internal security has never been easier. We help you protect your data, guide your people, and support business compliance. Safetica ONE prevents data breaches and makes data protection regulations easy to comply with by securing your business from human error or malicious behavior

SendQuick®

TalariaX™ develops and offers enterprise mobile messaging solutions for improving business workflow and productivity. Our award-winning range of 'sendQuick' SMS gateway solutions includes include IT Alerts & Notifications, Secure Remote Access via 2-Factor Authentication, Broadcast messaging, Business Process Automation and System Availability Monitoring. These solutions are geared towards addressing critical business requirements to minimize disruption during unplanned system downtime and provide security and confidentiality of sensitive business data.

nexus INGROUPE

Nexus, part of the IN Groupe family, is a leading global provider of Digital Identity and security solutions, trusted by enterprises and governments to secure people, devices, and services in the digital era. With decades of expertise in identity and access management, Nexus delivers advance technologies that enable organizations to establish Trust, ensure Compliance, and Protect Critical Digital interactions. At the core of its portfolio is the Smart ID Platform, a comprehensive solution for managing and securing Trusted Identities for Employees, Partners, Citizens, and connected devices. Through secure Digital Certificates, Cryptographic Key Management, Multi-Factor Authentication, and Credential Lifecycle Management, Nexus ensures that only authorized users and devices gain access to sensitive systems and data. As part of IN Groupe, a global leader in identity solutions with a strong government and enterprise presence, Nexus benefits from extensive expertise in Secure Identity Management and Regulatory Compliance. Its solutions address modern security requirements such as Zero Trust Architecture, eIDAS Compliance, and IoT Security, ensuring resilience against today's complex cyber threats. What sets Nexus apart is its ability to combine Security with Usability, empowering organizations to accelerate digital transformation without Compromising Trust. By securing Digital Identities end-to-end, Nexus helps businesses, governments, and service providers Build Confidence in a hyper-connected world.

Syteca

Syteca stands at the forefront of cybersecurity, delivering Advanced User Activity Monitoring across diverse environments, including Windows, macOS, Linux, and many more as well as scalable privileged access management (PAM) solutions. Designed to counter internal threats and unauthorized access, it offers transparent licensing, fast deployment, and adaptability for organizations of all sizes. Syteca's rich list of features includes password vaulting, automated account discovery, MFA, and approval workflows. Real-Time Session Monitoring and Incident Response mechanisms — such as blocking and alerts — mitigate risks and prevent lateral movement, providing centralized control over all privileged accounts.

TANIUM

Tanium is a leading provider of Autonomous Endpoint Management (AEM), empowering organizations with real-time visibility, control, and security across every endpoint. Through a single, unified platform, Tanium enables enterprises to automate patching, strengthen endpoint security, ensure compliance, and accelerate incident response at scale. Trusted by some of the world's largest organizations, Tanium helps IT and security teams reduce risk, improve operational efficiency, and build cyber resilience across complex hybrid environments.

SecurEnvoy

A Shearwater Group plc Company

SecurEnvoy - Simplifying Zero Trust Identity and Access. SecurEnvoy, a UK based cybersecurity innovator and a pioneer in Tokenless® Multi Factor Authentication (MFA). Since 2003, the company has helped over 1,000 organizations worldwide strengthen identity and access management with solutions that are simple to deploy, highly scalable, and designed to maximize existing IT investments. At the core of its offering is Phishing Resistant MFA, powered by FIDO2 Certified Tokens and enhanced with Location-Based Conditional Access, and Single Sign On (SSO). That means employees can use whatever device they like to confirm their identity, whether that's a desktop PC the latest wearable, or their personal smartphone. Unlike traditional approaches, SecurEnvoy identifies people, not devices—allowing employees to Authenticate Seamlessly using any device, from desktops and smartphones to modern wearables. Built on a Zero Trust Framework, SecurEnvoy unifies secure access and data protection, giving enterprises verifiable trust in every digital interaction. With flexible deployment options—on premises, hybrid, or cloud first—SecurEnvoy delivers robust protection against evolving cyber threats while ensuring usability and compliance.

utimaco®

Utimaco is a global leader in trusted data protection, key management, secure payments, and public warning solutions that empowers organizations to navigate AI-driven vulnerabilities and the emerging quantum threat landscape with advanced security solutions. Headquartered in Aachen, Germany, and Campbell, CA, USA, Utimaco empowers organizations to safeguard their most sensitive digital assets and Build Trust in an increasingly connected world. Its comprehensive portfolio includes hardware security modules (HSMs), key management systems, data protection technologies, and compliance-driven security platforms. Utimaco develops advanced On-premises and Cloud-Based solutions to protect cryptographic keys, digital identities, critical infrastructures, and high-value data assets.

As a provider of Root Of Trust, Utimaco secures industries ranging from financial services and payments to automotive, cloud services, public sector, and critical infrastructure. Trusted by banks, payment service providers, cloud operators, telecom companies, and government agencies worldwide, Utimaco delivers Robust Cryptographic Security that enables confident operations in today's risk-prone digital environment. Driven by innovation, a customer-first approach, and global compliance, Utimaco empowers Secure Digital Transformation along with long-term investment reliability. Its mission is clear: to build Trust in the digital society through Reliable, Scalable, and Future-Ready cybersecurity solutions

/ABSOLUTE

With the Absolute Security Cyber Resilience Platform integrated into their digital enterprise, customers ensure their mobile and hybrid workforces connect securely and seamlessly from anywhere in the world and that business operations recover quickly following cyber disruptions and attacks. Our award-winning capabilities have earned recognition and leadership status across multiple technology categories, including Zero Trust Network Access (ZTNA), Endpoint Security, Security Service Edge (SSE), Firmware-Embedded Persistence, Automated Security Control Assessment (ASCA), and Zero Trust Platforms.

MailStore by opentext

MailStore Server is one of the world's leading solutions for email archiving, management and compliance for small and medium-sized businesses. Businesses can benefit from all advantages of modern, secure email archiving with MailStore Server.

DNSFilter

DNSFilter is redefining how organizations secure their largest threat vector: the Internet itself. DNSFilter is making the Internet safer and workplaces more productive by blocking threats at the DNS layer.
DNSFilter resolves upwards of 130 billion daily queries. With 79% of attacks using Domain Name System (DNS), DNSFilter provides the world's fastest protective DNS powered by AI, blocking threats an average of 10 days faster than traditional threat feeds. Over 35 million users trust DNSFilter to protect them from phishing, malware, and advanced cyber threats.

E-7 CYBER

E-7 Cyber, based in the United Kingdom with a regional office in the United Arab Emirates, is an innovative cybersecurity firm dedicated to helping
enterprises and government organisations reduce the risk of data leaks.

Using cutting-edge solutions, E-7 Cyber enables clients to safeguard sensitive information in modern digital settings, including managing unauthorised screenshots or file sharing during online meetings, while maintaining the credibility and ownership of both digital & printed files.
The company's flagship offerings include:

- Blindspot: A next-generation data privacy solution designed to prevent insider-driven data leaks.
- Vigilance: Advanced monitoring of critical data, enforcing identity-based digital footprints, and delivering comprehensive compliance tracking.
- Regulatory Security Platforms: Streamlined solutions to ensure adherence to global and regional data protection regulations.

With these solutions, E-7 Cyber enables organisations to strengthen data protection, maintain regulatory compliance, and safeguard intellectual property in an increasingly complex digital landscape

ISARA

ISARA Corporation develops quantum computing readiness solutions to bring post-quantum security and resiliency to your mission-critical workloads. Our cryptographic posture management solution mitigates your data harvesting risk and reduces your attack surface by uncovering your actively used algorithms, identifying vulnerabilities, and providing clear risk-based prioritizations.

To secure your crucial IT, embedded, and OT systems against quantum threats, ISARA's production grade toolkit of standardized quantum-safe algorithms is the only solution in the market for OT & ICS manufacturers.
Advance Cryptographic Posture Management
ISARA Advance is a cryptographic posture management solution to address crypto agility, quantum readiness and architectural validation of your infrastructure. Advance creates enterprise-wide cryptographic inventories, assesses its strength, analyzes vulnerabilities, and gives security leaders the insights and reports on the use of cryptography at the network, endpoint, cloud, source code, 3rd party applications, and database layers. An intuitive dashboard offers a clear view of your cryptographic posture, breaking down barriers in order to mitigate data harvesting risks and ensuring workloads are resilient to quantum threats as well as providing architectural validation between critical workloads while integrating into existing systems (e.g., workflow, CMDB) to streamline remediation.
